

SAFETY, EFFICIENCY, BUSINESS RELIABILITY. EVERY DAY...

“Our vehicles are always in use and therefore require a huge amount of compressed air, thanks to the milk suction unit. And although, in the past, we replaced the cartridges every two to three months, vehicles would often break down in winter due to the compressed air system freezing up.

Since the beginning of 2010, we have used **WABCO Air System Protector PLUS** cartridges exclusively. Since then, we have experienced no freezing, despite the very cold winter. As each period of vehicle downtime and system damage costs a lot of money, we now use only **Air System Protector PLUS** cartridges on our milk collection vehicles.”

Heiko Ziesenis, responsible for the technical support for the frischli company fleet.

For over 140 years, WABCO has pioneered breakthrough electronic, mechanical and mechatronic technologies for the commercial vehicle industry.

WABCO

The frischli company produces a wide range of dairy products, which are known for their high quality far beyond the borders of Lower Saxony. Based in Rehburg-Loccum, near Hanover, the company continues to produce a large part of its product range directly on site. To collect the fresh milk from all the farms in the region, the company operates several milk collection vehicles.

frischli

Long operating times and special milk suction units mean that these vehicles require a particularly large amount of compressed air. Correspondingly, the air dryer cartridges are also heavily used.

Although the company used to replace the used cartridges roughly every other month, water would often form inside the compressed air system, which led to the components freezing up in winter.

The FW Automobile workshop, part of the Wesling Group, looks after the frischli vehicles and has paid particular attention to this issue. In close collaboration with frischli, the FW Automobile workshop and WABCO, the milk collection vehicles were involved in a special WABCO field examination for heavy applications. Since January 2010, only WABCO Air System Protector PLUS cartridges have been installed in the frischli vehicles – with great success.
