

# INCREASED EFFICIENCY FOR YOUR WORKSHOP OPERATIONS

“From July 2012, we started using **WABCO’s Leakage Detector** in our workshops to spot air leaks much faster.

As a result, we realize time savings of up to 50 percent in the failure detection process.

The **Leakage Detector** offers reliable diagnostics in the most efficient way – a perfect solution to optimize maintenance efforts in commercial vehicle workshops.”

**Christian Moebius,**  
Workshop Manager,  
Josef Paul GmbH & Co. KG

For over 140 years, WABCO has pioneered breakthrough electronic, mechanical and mechatronic technologies for the commercial vehicle industry.

**WABCO**

PAUL Nutzfahrzeuge offers multiple-brand service for trucks, buses and transporters. Furthermore, the company is a market leader in the special vehicle construction sector. Founded more than 200 years ago in Vilshofen/Zeitlarn, Germany, PAUL Nutzfahrzeuge today employs more than 350 employees at its operations in Passau and Vilshofen, Germany.

Leakage detection has been a time consuming task. As a premium workshop for high-profile customers PAUL Nutzfahrzeuge needs to constantly deliver best-in-class service for customers in the most efficient way. Up to now, the leakage detection technology in use was not reliable and didn't meet the high demands of a premium workshop.

PAUL Nutzfahrzeuge has a limited number of service stations. Therefore, the amount of time available for service per vehicle is strictly limited. Long repair times and time consuming detection of air leakages are blocking capacities for other vehicles resulting in inefficient utilization of the workshop.

## EFFICIENT WORKING PROCESSES ALSO REQUIRE EFFICIENT WORKING TECHNOLOGY

PAUL Nutzfahrzeuge started using WABCO's Leakage Detector from July 2012. The WABCO system detects air leaks much faster than comparable systems. Thanks to soundproof headphones the leakage detection process is not disturbed by environmental noises. WABCO's Leakage Detector has already helped PAUL Nutzfahrzeuge to reduce time for detection of air leaks by 50 percent and thus to increase workshop efficiency.
