

VACUUM PUMPS

FOR DIESEL AND GASOLINE ENGINES

RELIABLE VACUUM SOURCE FOR AUTOMOTIVE BRAKING APPLICATIONS

- Ultra low power consumption providing savings of up to 1.5 g CO₂ / km
- Unique pump geometry provides lowest possible internal forces and vibrations
- Pump interfaces tuned to specific customer requirements
- Modular design reduces component cost and customer tooling investment
- Different pump designs and capacities available
- Cost efficient design
- Low power consumption
- Efficient vacuum performance across the temperature range
- High durability
- Low oil flow
- Low weight and fewer parts
- Low vibration and noise

More than 50 years vacuum pump production experience
