Diagnostic Software

The rapid development of vehicle technology, with its increasing range of functions and security technologies, needs good diagnostic tools – and these of course in many languages.

WABCO offers a more comprehensive suite of Diagnostic Software than ever before.

The excellent graphical display facilities of PCs enable a clearly arranged diagnosis.

With extensive repair info, wiring diagrams with measured values included, diagnosis and repairment will succeed faster and easier.

Accessory Case

In this suitcase, all important adaptors for diagnosis on WABCO's electrical systems are clearly arranged:

- Diagnostic Interface Set
- 35 pin adaptor for ABS, EPS und ECAS
- adaptor ABS-D
- central diagnostic plug DaimlerChrysler
- diagnostic cable EBS Euro
- diagnostic cable trailer
- diagnostic connection for Trailer ABS (VCS)
- diagnostic connection for Trailer EBS

Diagnostic Software Subscription

To be up to date, lists with program versions must have been checked and floppy disks have been sent around.

Herein, the Software Subscription via Internet has its decisive benefit: via email we can inform you about updates very fast.

You can download the program and use it or wait until you really need this specific diagnosis tool. At that time you will access to it – even on weekends.

By the way: Internet Access is needed only while loading the disk images.
