

New CALM II replaces predecessors

WABCO has launched the next generation of cabin dampers. The new CALM II (Cabin Air Levelling Module) replaces the popular CALM I.

From a technical perspective CALM II supersedes all predecessors of the CALM I version. The fitting dimensions remain the same, meaning that it remains backwardly compatible with all previous applications.

CALM II is predominantly installed in MAN TGA and TGS type vehicles and Steyr TG-A vehicles. CALM II is also installed in Fendt and Claas agricultural vehicles.

Product benefits at a glance:

Below are the benefits of CALM compared to conventional cabin damper systems:

- Greater load capacity
- System integration
- No set-up necessary
- Minimal space requirement
- Minimal installation costs

CALM II is available immediately. CALM I will soon no longer be available.

Attached is a parts number chart including comparison references and vehicle manufacturer numbers:

CALM I and CALM II parts number chart					
CALM I previous WABCO part no.	CALM II new WABCO part no.	Sachs	Boge	ZF Service - ZF Series	MAN
