Market Information ABS relay valves with adapter cable in a set

As we announced some time ago, WABCO will in future be selling ABS relay valves with DIN bayonet locks instead of the old Costal connection.

It will take some time for the changeover to reach all the vehicles on the market, And new trailer vehicles are already being equipped exclusively with DIN bayonet cables and units. When you are replacing defective ABS relay valves, we recommend that you also change over the cables, Otherwise you will need an adapter cable which you can obtain from your WABCO partner by quoting order number 894 601 132 2.

For a transitional period, we are going to be offering two important replacement variants for the replacement market in one set together with the adapter cable:

472 195 020 7 replaced by **400 600 464 0** (472 195 031 7 + 894 601 132 2)

472 195 040 7* replaced by **400 600 465 0** (472 195 041 7 + 2 x 894 601 132 2)

* Remaining stock is currently being sold off
