

The Case Storing the Accessories for Trailer Diagnosis

Diagnostic software

Rapid further development of vehicle technology and a permanently growing spectrum of functions along with polished safety technology also requires good diagnostic systems – in as many languages as can be of course. WABCO offers an ever widening line-up of PC Diagnostic Software. The excellent graphical representation possibilities of a PC's render transparent diagnoses possible. Using extensive repair information and wiring diagrams together with measured values will make diagnosis and repair easier and faster.

The accessories case

WABCO's Diagnostic Software requires a standard Windows PC or notebook only. The computer is connected to the automotive electrics via adapter cable and interface.

Depending on the corresponding system, there are also various requirements on the adapter cables. The trailer accessories case offers the "hardware" for the diagnosis of all trailer systems and helps you keeping track.

The accessories case for trailers is supplementing the software subscription in an optimal way

Until now, you would have to check lists with version information on diagnostic system updates and send diskettes to and fro. The Internet as medium has a decisive advantage in this case: Just download the current version of the required diagnostic program then when you need it. And analog to the accessories case, all is complete: The diagnostic package for trailers comprises every single software you may need for WABCO trailer systems.

Trailer Diagnostic Accessory Case
