PIN Assignment for WABCO Diagnostic Software

You can inquire a PIN for the WABCO diagnostic program from us after having participated in system training. Using this Personal Identification Number you will enable the extended software functions and thus change the setting of the control electronics.

The number of PIN inquiries is growing due to widespread distribution of our software and this may cause delays in their assignment. Therefore, to simplify the assignment process for you, we have established a new system: If you are using our diagnosis subscription and have received a license certificate during your system training then you can directly obtain the PIN from the Internet in future.

Following will change

Diagnosis subscribers (for PIN operation) have entered their subscription number hitherto when installing the software. This 6-digit number is stored as fingerprint onto the control electronics upon changing system parameters. You will receive a number that is individually connected to your person for future installations.

Advantage: This will allow separation of the corporate-related subscriber number and personal training. This enables an employee to move to another branch office "taking along" his or her PIN data.

Login with License Certificate

- Open Internet site www.wabco.info/pin
- Login using the license certificate number and the confirmation number that is exclusively known to you. This will authenticate you and prove finished training at the same time.
- Your personal data and the already finished trainings will display for your checking.
- When you enter the user name for the software download now then this will be proof of software licensed from WABCO for you.
- You will receive the user identification and the PINs for the programs and versions for which proof of training has been stored.

Software Installation

In case that you want to work with your personal user identification then you will need to enter this number already during installation. You even may change the user identification during running the program provided you are using latest diagnostic programs. This leaves the chance that several employees can take turns with diagnosis and parameter setting on their own authority.

We would like to expressively point out in this connection that the subscriber license allows software installation on one computer exclusively that may be however used by several employees. Additional use of the software at branches is not allowed. We offer reasonably priced secondary licenses for this type of application. Speak to your WABCO partner about that.
