

Tracing information on wheel brakes is much easier now

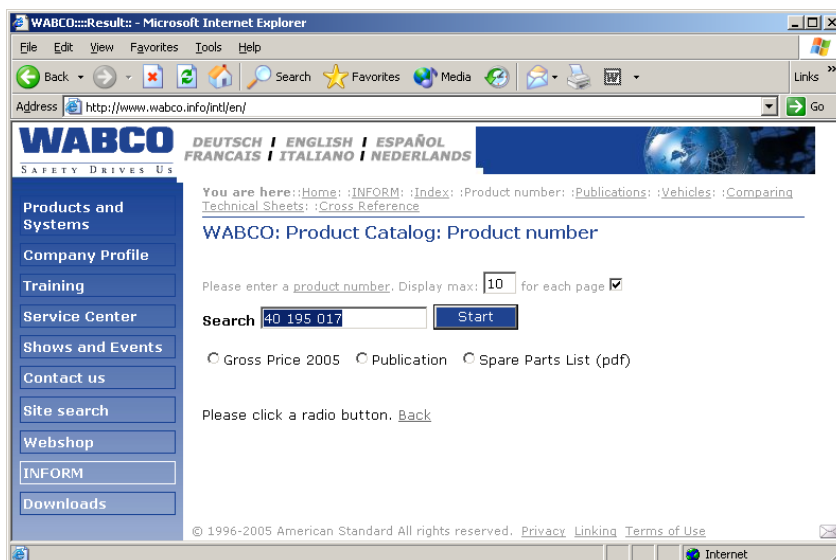

You want to change the pads on your trailer but you have only the number imprinted on the brake type label?

Now you can enter this brake number in the entry mask of our Internet product catalog INFORM also without blanks using product number 40195017 as example shown below.

Click onto the **Start** button. An option will be displayed for you as suggestion. View this option by clicking onto the highlighted field. The standard representation of the same product number displays.

Simply click on this number and INFORM will show you the available information.

Click on the spare parts button for retrieving the repair information desired. You will find the part number of the required repair kit there. You may now enquire the price or immediately place your order using the repair kit product number.

Use button **Publications** in the event that you should not be sure about correct application of the individual spare parts when mounting them. You will find assembly and maintenance instructions there exactly describing corresponding maintenance work.

In addition, you will also find market information pertaining to this brake there that has been created by WABCO.

You can get further information using the index or publication function on the INFORM main menu. Entering a keyword will help you browsing the index or publications.

This INFORM database optimization is a further and essential step in providing you with all necessary information about safe repair work.
