

## New WABCO shut-off cocks

WABCO have developed a new generation of shut-off cocks.

The internal parts of these shut-off cocks mainly consist of plastic so that the resistance to corrosion is improved. This means that any restricted movement or seizing is avoided, even after a long operation time under wet operating conditions.

The production of the old shut-off cocks will stop after a short start-up phase of the new generation valves, the conversion will be in the 2<sup>nd</sup> quarter of 2007.

Old version	New version	Functional symbol

452 002 107 0	<b>452 002 132 0</b>	
452 002 114 0	<b>452 002 133 0</b>	

### Technical Data:

Medium: Air  
 Pneumatic port: M 22x1.5  
 Working pressure: 10 bar  
 Ambient temperature: - 40°C to +65°C  
 Handle: Plastic  
 Installation: Fitting protected against spray

For fitting data please refer to the outline drawing available via our product database INFORM under [www.wabco-auto.com](http://www.wabco-auto.com).
