

The new compressed air test kit “Agriculture” 435 002 011 0

Over the past years, the portion of compressed air supply systems in tractors and the portion of pneumatic brake systems in trailer vehicles for the agricultural or forestry industry (aof) has been growing steadily.

We have responded to this development! We have produced a test kit whose content is designed specifically for these types of vehicle and that you can now use for checking such systems yourself.

If you have a larger fleet of "aof" vehicles or work in a workshop where compressed air systems are retrofitted, or where repairs and tests are performed on such vehicles on a regular basis, this test kit provides an ideal supplement for your service.

Documents attached to this kit include:

- instructions on maintenance and leak tests,
- diagrams on fault finding and fault elimination
- instructions on setting the predominance of the trailer brake valve,
- settings for the LSV controller/manual controller,
- a description of how to converting a single-line into a dual-line compressed air supply system.

Content of the test kit “Agriculture” 435 002 011 0		
Quantity	Components	Part number
2	Pressure gauge “16 bar”	453 004 007 0
1	Test hose “blue”	452 600 003 0
1	Test hose “white”	452 600 004 0
2	Test connection M 16x1.5	463 703 120 0
2	Test connection M 22x1.5	463 703 115 0
1	Coupling head “red” M 16x1.5	952 200 021 0
1	Coupling head “yellow” M 16x1.5	952 200 022 0
1	Coupling head “1 line“ M 22x1.5	452 201 010 0
1	Printed matter (de)	815 020 083 3
1	Printed matter (en)	815 010 083 3
