

## Start of series SmartBoard 446 192 110 0 – Now available!

Monitoring a wide range of trailer functions is important for improving the performance of haulage companies and therefore reducing costs of the fleet.

With the integration of a number of control and indicating devices in a single easy to use multifunctional system, the SmartBoard helps to make trailer vehicles safer and more effective.

The SmartBoard is designed to be mounted at the outside of the vehicle frame with a connection to TEBS D or E.

### Your Benefit

- Use the SmartBoard for control of the air suspension system and the lifting axle (in connection with Trailer EBS E).
- The SmartBoard displays the kilometre reading of the trailer vehicle even when it is not hitched to the towing vehicle.
- Prevent overloading of trailers by reading the current axle load, alternatively use the integrated warning lamp.
- Read out system data and current diagnostic messages of the Trailer EBS and connected systems. The warning lamp also signals a current message.
- Save time by reading out the tyre pressures via the SmartBoard (in connection with IVTM) and the condition of brake linings (in connection with the WABCO wear indicator BVA).
- Make use of the SmartBoard by means of a simple menu structure in your own language (it is possible to switch between 9 languages) assisted by intuitive symbols.

### Features of the SmartBoard

- Simple operation and user guidance by means of a graphic display and three control keys.
- Main functions are called by a single "click".
- Splash water proof according to IP 6k 9k.
- Battery operation for use of the SmartBoard on the unhitched trailer.
- Milometer function available even without plug connection to the towing vehicle.

The SmartBoard is easily retrofitted on trailers with EBS D or E generation, We will provide more details on this topic in the near future.
