

Changes affecting the Diagnostic Software subscription packages

WABCO Diagnostic Software packages have been an important component for the successful fault analysis of commercial vehicles for years. The successful analysis, in turn, is elementary for fast and successful repair.

A steadily increasing number of diagnostic programs ensure that different vehicles and systems are covered as extensively as possible and provide sustained support for the competence of our service partners for commercial vehicles.

Distribution of the Diagnostic Software by means of subscription ensures that the workshop always has up-to-date versions of the diagnostic programs.

A considerable extension of the scope of software packages in the subscription has made a price adjustment as of 1 March 2008 necessary. An overview of packages is provided in the table below:

Description	Part number	Scope	New price	Renewal	Valid for
Complete package	246 300 900 0	32 programs	1450,- €	448,- €	12 months
Trailer package	246 300 901 0	8 programs	550,- €	163,- €	12 months
Bus package	246 300 902 0	19 programs	800,- €	240,- €	12 months

The subscription is still valid for 12 months. Within this period, subscribers are permitted to download all programs of the selected package in all available languages from the WABCO Diagnostic Software Website.

You will find an overview of the available programs and languages on the Internet if you open www.wabco-auto.com, click the fast access link *Diagnostics*, then the *Download Software* menu item, and then *Diagnostic Software*.

Prices for further licenses for your company (so called multiple licences), as well as custom solutions due to specific country-related circumstances (no Internet access etc.) can continue to be obtained via your WABCO sales representative.

All subscriptions currently in progress remain valid for the periods already paid for. We will continue to notify you well in advance of the date your subscription expires and will apply the new prices together with the next update.

All WABCO diagnostic programs are subject to the same high standard of quality as any WABCO product. With each new version we also make every effort to further improve the user friendliness of our software. The automatic update function planned for 2008 is an examples of this policy. The diagnostic computer is thus always kept up-to-date without involving a major effort by the user.
