

WABCO Expert Diagnostics Memory Extension

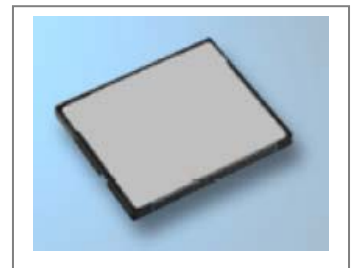

WABCO Expert Diagnostics (XD) is a universal diagnostics system that is updated and enhanced on a quarterly basis.

More vehicles are covered with each new version of the software. However, due to new graphics and an enhanced range of functions, more memory is required for program execution.

For version 4.81, to be released at the end of December, you will therefore need an additional Compact Flash Card.

CF Memory Extension 446 302 060 0

The WABCO CF Card is already used in the Flight Data Recorder kit. With the software version 4.81 or any subsequent versions, such a card must be inserted in the Smart Module (in the case of XD Advanced or Premium) or into the HandHeld Tester (in the case of XD Compact).

- WABCO Compact Flash Card 446 302 060 0
- Is the equivalent of a commercially available CF card, type I or II with 2 GB, such as SanDisk Ultra II, SDCFH-2048-388.
- Is used with software version 4.81 and any subsequent versions.

For more information on WABCO Expert Diagnostics visit

http://www.wabco-auto.com/service_and_support/diagnosis/expert_diagnostics

You will find instructions for installing the CF card in the XD user manual. If you have any questions, please contact your WABCO partner.
