

Product warning and product note: Third party lining set and retaining system

The company Thos. Winnard & Sons Ltd., Rotherham, UK, is offering repair kits for compressed air disc brakes of the WABCO PAN series on the spare parts market. The repair kits each comprise a brake lining set, as well as the retaining set (holding-down springs, retaining clips, screws and end plugs).

At WABCO, samples of the repair kits offered on the spare parts market for WABCO brakes are regularly inspected for quality. This is also done to comply with the legal obligation to monitor products. The examinations of the stated "Winnard" repair kits have shown that the repair kits do not comply with WABCO standards of quality.

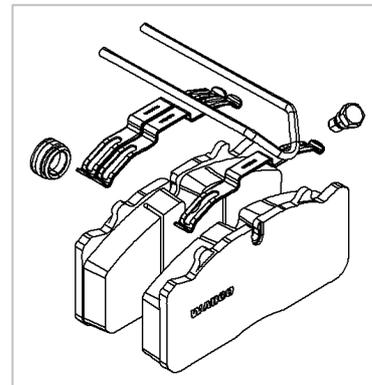

Fig. 1: WABCO repair kit

We therefore point out that the stated repair kits constitute a major risk to safety. The "Winnard" repair kits examined by WABCO had low quality hold-down springs installed.

Since the hold-down springs do not meet WABCO quality requirements, premature spring fractures must be expected while the vehicle is in operation. The spring force is also significantly lower than the value approved by WABCO.

The inadequate spring forces are likely to cause noise development and greater damage to the hold-down system so that a premature fracture of the hold-down springs must be expected. This also results in excessive wear within the lining guidance system, which in the end means that the brake needs to be replaced.

In the worst case the tyre inflating valves could come off or be damaged in the event of a spring fracture due to unsecured brake parts.

WABCO quality requirements correspond to 300,000 driven kilometres in overland transport. During the tests performed on the "Winnard" repair kits, the hold-down springs fractured within a short space of time. On no account does this meet our quality standards.

The test results prove that the springs have only 0.8 – 12.0 percent of the required service life. Due to the premature failures it must be assumed that these springs will fail well before the wear limit has been reached.

Fig. 2: The fractured third party hold-down springs

This is how you can recognise original WABCO hold-down springs

All original hold-down springs have the WABCO logo.

This makes it easy to distinguish them from (not approved) third party hold-down springs.

We point out that when spare parts not approved by WABCO are used no legal claims can be filed against WABCO for faults and any consequential damage.

WABCO hold-down systems are protected by patent (EP 0 694 707 B1) for the entire WABCO PAN series.

Only WABCO and authorised WABCO partners are permitted to distribute protected components. In the event of patent infringement, WABCO reserves the right to sue for damages and an injunction against the patent infringement, and the destruction of the objects which infringe patents, and also reserves the right to pursue prosecution under criminal law.
