

**Extend your Trailer EBS knowledge for the new version E2**

With our new e-learning course, the "Trailer EBS E2 Add-on", you can deepen and extend your existing knowledge of Trailer EBS E so you can diagnose and put into operation TEBS E2 systems as well.

Compared to the previous version, Trailer EBS E2 contains enhancements to existing functions, so that now, for example, electronic air suspension control for drawbar trailers is also supported. There are additional components for TailGUARD (tail-end monitoring), in the shape of ELEX (ELECTronic EXTension module) and Trailer Remote Control. Because there have been so many system changes, the TEBS diagnostics program has also been adapted - a new PIN is used for this.

The training course is the same as the familiar e-learning courses, except that this is just an add-on course, the requirement for which is that you have already completed a training course.

Trailer EBS E add-on course	
Training requirement	Training goal
PIN via TEBS E training	PIN for TEBS E2 diagnostics software
PIN2 via TEBS E e-learning course	PIN2 for TEBS E2 diagnostics software

E-Learning means: You can start right away. You can determine the speed at which you learn. You can stop at any time, e.g. to continue with the course the following day.

[Access e-learning here.](#)

With the PIN2 new Trailer EBS E modulators can be put into operation using pre-defined parameter sets.

The 'big' PIN also enables system functions to be changed and the functional scope to be extended when retrofitting components.

Please note that Trailer EBS E is also supplied in version E2 in the replacements market.

The add-on course is currently offered in German and English.

By combining the trailer EBS-E e-learning course with this add-on course, you will be ready for Trailer EBS E2 in no time - even with no prior knowledge!

Of course, we also offer Trailer EBS E2 courses in our training centre.
