

New pipe extensions for spring brakes

In order to improve the scope of application for the WABCO spring brakes where conditions are cramped, we now also supply the associated pipe extensions for the common 16/24 and 20/24 cylinder types.

The new pipe extensions from WABCO provide many **benefits**:

High standard of safety:

- Clear identification of parking and service ports by off-set positioning; avoiding incorrect connection.
- Cracks and abrasion marks on the brake hoses are easier to detect.

Cost savings:

- Fast assembly due to the connections being led out from a cramped installation position. Therefore: the brake hose is easily connected.
- Low weight: Combination of cylinder and pipe extension is the lightest on the market.

Easy to handle:

- Fits even in restricted installation conditions: One of the most compact designs (combination of cylinder and pipe extension) on the market.
- Secure sealing: The sealing ring between pipe extension and cylinder cannot slip out of position or get lost during assembly.
- Compatibility: brake hoses can be connected with all commercially available unions.

Please refer to the overview below for the WABCO order number.

Overview of double-diaphragm spring brake range			
Cylinder type	Cylinder	Fitting extender	
16/24	925 384 010 0	925 384 050 2	★
20/24	925 380 101 0	925 380 050 2	★

The pipe extensions are supplied in **assembly sets** with banjo bolts, O-rings and instruction.
