E-Learning "WABCO electronic systems in buses"

WABCO now also offers you an E-Learning course for the EBS, ECAS, MTS and ATC systems in buses:

- You will acquire basic knowledge of the systems' operating principles.
- You will become familiar with components, installation and commissioning of the systems.
- You will learn how to use the diagnosis for fault finding, testing and configuring the respective system.

E-Learning means:

- You can start immediately wherever you are. You determine the speed at which you learn and can stop at any time, to continue with the course the following day for example. All you need is a computer with internet access.
- Complex content is presented in an easily comprehensible manner using sound and images.
- Animations and video make learning diversified and interesting.
- Tasks, questions and a final test for every module ensure successful learning.

Once you have successfully completed the learning modules, you will obtain PIN access for the following systems: ECAS (PIN2 calibration), MTS, ATC.

Access E-Learning here: wbt.wabco.info/

Of course you can also test a [demo version](#) free of charge.

You can purchase the access code for the course online by credit card or request it via the retail system using order number 200 300 108 0.

We can also offer you courses for buses at our training centres.

For more information, please contact your [WABCO partner](#) or visit our WABCO University at: www.wabco-university.com
