

## New EBS threaded ISO 7638 socket for the trailer connection

WABCO now offers a threaded variant of the 7-pin socket and thus an easy to install replacement solution for connecting trucks and semitrailers equipped with ABS or EBS.

The following features make the EBS socket with threaded contacts so convincing:

- A colour coding on the contact holder makes it easier to assign individual leads to contacts.
- The single contact seal in the contact holder results in a high-level protection class (IP69K).
- An additional cover protects the cover spring against damage.

This produces the following benefits for you:

### Safety:

- Protection against incorrect connection: Ability to assign (colour coding) individual leads clearly during installation prevents short circuits.
- Compliance with ADR requirements acknowledged by TÜV approval.
- Product according to ISO 7638: 100% tested.
- Dust- and waterproof even when cleaning the vehicle using high-pressure cleaners – due to single contact seal.

### Cost savings:

- Quick to install due to clear identification of how individual conductors are assigned.
- No special tools needed for fitting the contacts.

The 7-pin threaded socket can be installed in all common commercial vehicles and trailers. They should not be missing in any service vehicle.

Overview 7-pin socket	
Description	WABCO number
screwed	<b>446 008 433 2 <i>new</i></b>
crimped	446 008 404 2

Matching cables	
Description	WABCO number
ISO 7638 (7-pin)	446 008 243 0 (Classic)
	446 008 244 0 (Economy)
	446 008 700 0 (Standard)
