

WABCO ULTRASONIC TRANSMITTER

Damage and leaks on door and window seals are regularly occurring problems in commercial vehicles. Frequently these result in annoying driving noises in the vehicle's interior and unwanted penetration of moisture.

Identifying these often tiny leaks is a time-consuming and complicated challenge for any workshop. With the Ultrasonic Transmitter WABCO now launches a product that helps workshops identify these leaks quickly and reliably.

FUNCTION

The spherical Ultrasonic Transmitter evenly fills an enclosed space with ultrasonic sound waves that are not audible to the human ear. For application in the workshop, the Ultrasonic Transmitter is placed within the closed interior of the vehicle.

The user can now scan all the affected vehicle seals using the WABCO Leakage Detector (400 606 410 0). Any damage or leak is then easily and quickly located as the sound generated by the Ultrasonic Transmitter intensifies in this case.

THE BENEFITS FOR YOUR WORKSHOP

- Significant time saving when looking for leaks on door and window seals that are difficult to find.
- Significantly more reliable in locating leaks and damage than traditional methods.
- Increase customer satisfaction by reducing driving noise in the vehicle's interior.
- Spare your customers a lot of trouble and extra costs incurred by moisture damage as a result of damaged seals.
- The 14 spherically arranged ultrasonic transmitters enable a uniform distribution of ultrasonic sound waves within the vehicle. The device does not need to be repositioned.
- The device is completely maintenance-free and does not need to be calibrated.
- Increase customer satisfaction with shorter repair and idle times.
- Benefit from the usual high WABCO quality.
