

NEW WABCO PRESENTATION SOFTWARE EBS 5.0

With immediate effect, WABCO provides a new version of the successful interactive presentation and simulation program EBS. It includes important information about the most recent braking systems EBS3 and Trailer EBS E3.

MULTIPLE IMPROVEMENTS

Training courses on WABCO EBS systems are all the more successful if they are accompanied by the corresponding WABCO presentation software. With version EBS 5.0 you can now communicate the latest state-of-the-art commercial vehicle technology as it includes many updates and additions. Here are just a few examples:

- Presentations, graphics and pictures on the subject of EBS3 for towing vehicles, EBS E3 for trailers and the latest additional systems for trailers have been integrated into the show section of the software.
- The *circuit diagrams* section has been supplemented by pneumatic/electrical diagrams for Actros, DAF, EvoBus and various trailer types. Of course these diagrams can also be zoomed just like all the previously included diagrams.
- The *system diagrams* include additional basic diagrams with animations for Actros, DAF, EvoBus as well as more trailer types.
- The latest EBS system is illustrated by photos and partly by cross-section animations in the *Devices* section.
- The new item *Calibration and start-up* for the TailGUARD functions and ultrasonic sensors has also been added to the program.
- Dialogue boxes have been enlarged and the latest Flashplayer (11.xx) has been included. Of course the program is compatible with all common Windows operating systems (32bit and 64bit).
